THE FOLLOWING

IS FROM THE CIA/IMAGERY ANALYSIS DIVISION. CITE CIA-P-125.

1. REFERENCE CABLE CITE CIA-P-124, WHICH REFERRED TO THE KAPUSTIN YAR MISSILE TEST CENTER BEER CAN RADAR. FURTHER ANALYSIS OF [REDACTED] AND THE THREE PRECEDING KH-4 COVERAGES OF THE KAPUSTIN YAR ELECTRONICS R&D AREA, RESULTS IN A RE-EVALUATION OF THE IDENTIFICATION "PROBABLE CUT PARABOLOID ANTENNA, FIRST SEEN [REDACTED] WITH A CHORD OF APPROXIMATELY 55 FEET."

2. SHADOW ANALYSIS INDICATES THAT THIS PROBABLE ANTENNA CONTAINS CERTAIN FEATURES INCOMPATIBLE WITH A CUT PARABOLOID ANTENNA. ITS UNUSUAL CONFIGURATION AND POSSIBLY CHANGING POSITION WITH REFERENCE TO THE CIRCULAR PLATFORM SUGGESTS IT WAS STILL UNDER CONSTRUCTION DURING THE PERIOD OF PHOTOGRAPHIC COVERAGE OR IT POSSIBLY IS A MULTI-FUNCTION RADAR WHICH HAS CHANGED POSITION BETWEEN MISSIONS. THERE IS NO EVIDENCE OF MOVEMENT DURING A SINGLE MISSION, HOWEVER LIMITATIONS OF KH-4 PHOTOGRAPHY WOULD PRECLUDE DETECTION OF VERY SLOW RATES OF MOVEMENT.

3. THIS PROBABLE ANTENNA ON THE KAPUSTIN YAR BEER CAN STRUCTURE WAS FIRST SEEN [REDACTED]
